Gestational diabetes mellitus (GDM) is associated with accelerated atherosclerosis and subsequent cardiovascular diseases (CVD). The aim of this study was to compare serum levels of carotenoids (including lutein, zeaxanthin, lycopene, alpha-carotene, beta-carotene), tocopherols (vitamin E), and retinol in women with and without GDM. Serum levels of carotenoids, tocopherols, and retinol were compared in 96 women with GDM, 96 women with a normal glucose tolerance (NGT) during pregnancy, and 96 healthy nonpregnant women (controls). In all study groups, significantly higher levels of lutein/zeaxanthin, alpha-carotene, and beta-carotene were found in GDM patients a1d647c40b
