The first AutoCAD was released in December 1982 as a desktop app running on microcomputers with internal graphics controllers, primarily the Atari 800, Atari ST, Commodore Amiga and Atari Falcon. At this time the company was called Precept Technologies. The first example of AutoCAD at work is that of an engineer working with his hand in an air bearing, originally seen on the cover of the company's first report to the public, the Precept Technologies Report. AutoCAD's license is now owned by Autodesk Inc. In the United States, Autodesk sells AutoCAD as a perpetual-license download on the web. For home use the software is sold in DVD form or on a CD-ROM. The most current release of AutoCAD, the most recent of which is 2017, is AutoCAD LT for the Windows platform. AutoCAD is currently the world's best-selling commercial software product. According to the company's own figures, AutoCAD was the fourth-best-selling software product in the United States during 2017, with 1.2 million users.[1] AutoCAD was the 13th-best-selling product overall for that year. Home users who are interested in the technical workings of AutoCAD can find many on-line publications, including a CAD/CAM and CAD to GIS applications parts section of the Autodesk website. The name "AutoCAD" is a combination of "Auto" and "CAD". The former is an abbreviation of "automatic" and was historically, when it was used for graphics software, a generic term for any type of graphics software designed to perform a repetitive task. The "CAD" stands for "computer-aided design" and was historically, before computers were used for design, the name given to drafting work by human drafters. AutoCAD is a commercial product and is not available for free in any way. The only exception is when a person is studying AutoCAD to pass the Autodesk Certification Exams for the Professional or Architectural license exams. History In the 1960s, several draftsmen drew up plans for parking garages in New York City. Because these drawings were submitted for approval, they needed to be transferred from drawing boards to film to the design board. The drafting process was tedious and time consuming. Before long, this became a problem for both the design engineer and the parking garage owners. So, the draftsmen
