Version history AutoCAD Product Key 2010 AutoCAD 2010 is a completely new-look version of AutoCAD. The version number was not changed to correspond with a significant change in the underlying technology; but the new program is a vast step forward from the previous AutoCAD 9. The new version came with a number of changes and advancements, such as the ability to be used as a fully functioning version control system. The ability to create a professional looking presentation of a drawing was also improved. The new user interface has several noteworthy changes. The User Interface has changed to a much more streamlined menu-bar. These menus are now ordered by the type of object or command. The AutoCAD Users Guide and related Windows Help provide detailed information about these menus, along with screen shots. The cursor is also much easier to read as it can be seen when the mouse pointer is placed over it. The moving text tool (TXT) has been greatly improved in the 2010 version; allowing the user to easily draw text inside any path, rectangle or polyline. This was added to help the user draw objects and labels quickly and easily. This same text tool is also available from the Text menu. Importing and exporting of DXF files have also been improved. The .NET Framework, which is included with AutoCAD 2010, allows the import and export of DXF files as well as importing and exporting of DWG files. This improves the efficiency of the program and streamlines operations. DXF files can be imported and exported in both native (DWG) and Simplified outline (SKP) formats. It is also possible to import and export in the native AutoCAD 2007 format. The new version includes a version control system known as SmartDraw. AutoCAD 2010 uses a new version of Direct3D. Version 11 of Direct3D supports AutoCAD 2010 which brings a host of improvements including improved anti-aliasing, bump mapping, and support for quadrics. AutoCAD 2010 introduced a completely new visual style, as opposed to the more familiar dark theme. It also has a number of new graphical features such as: Dynamic Lines: this new feature allows lines to be created with any shape. It is very useful for creating rough shapes, and helps to quickly create large numbers of objects. Form Shapes: these are a1d647c40b
