Autodesk sells AutoCAD throughout the world. Contents show] History AutoCAD was created by Norman R. Clark, Michael J. Farinash and Frank S. Stephens, who were then employed at the Massachusetts Institute of Technology (MIT), and was originally designed to save CAD time on microcomputers. The first public demonstration of AutoCAD was held on January 14, 1983 at the International Design Conference in San Francisco. However, at this time, the software was still in the early stages of development and did not include many of the most useful features that were later added. The first version of AutoCAD was released on December 18, 1982. The release was published in Computer Graphics World and Computer Shopper magazines. In May 1985, Autodesk acquired a company called Vazdesign, which was developing a CAD package called IdeaCAD, and brought in Norman R. Clark and Michael J. Farinash to work on the product. They renamed it AutoCAD and began selling it through their personal computer retail stores. By early 1987, Autodesk had acquired a number of companies, including architectural design software firm EGS. This gave Autodesk a presence in the architectural design market. AutoCAD v.2, released on May 20, 1987, was the first version of AutoCAD that could be used from a personal computer (PC). This was because the original PC's did not have internal graphics hardware. AutoCAD is based on earlier design software from Vazdesign, which had been sold to Autodesk before the company was purchased by Autodesk. For the first ten years of its history, AutoCAD was marketed as a product for graphic arts professionals. When Autodesk acquired Vazdesign, the company started marketing AutoCAD as a product for CAD users. By the late 1980s, the company

Business 2.0 | The World of the Blog WHEN the net came along, a few pioneers like Jeff Jarvis and Kevin Werbach saw it as a new frontier that would change the way we live and work. For some of those pioneers, it has happened. For some, it hasn't. But for anyone who lives and works online, it has altered the way we do business. Now, even when you're not at your desk, the Web can be your office. Not only can you work from your couch; you can start your own business and work from almost anywhere. If you're going to be an entrepreneur, you can make some of the same arguments about blogging as you would about running a professional company. Consider the dichotomy. Blogs are the de facto mode of communication for all professional and personal interests. Businesses, just like individuals, may use blogs as the primary mode of communication. And yet, I think blogs are different in some very important ways. It's easy to become discouraged when you think about how difficult it is to build a business these days, what with layoffs, bankruptcies, and whatnot. That's why I find it hard to understand the popularity of blog-hosting services like Blogger and Typepad. They seem a bit like pizza--they offer cheap and quick distribution of a good product. Bloggers of the world unite! It's not that blogging is a cheap or easy service, but the infrastructure of blogs is relatively simple, and it's really easy to get started. But to do that, you need to have a good web site. After all, you want people to know you're there, and have a good place to send them. That can be a challenge, especially if you're a small business that

These enhancements make it even easier to incorporate the wide variety of feedback from people working on your design, whether they’re on paper, email, or the web. Import from Print With the rapid adoption of scanners and printers, it’s now much easier to add correctable errors to your designs—and see them reflected on paper, printed, or displayed in your office. With Print Import, you can now quickly and easily incorporate corrections, such as addressing typos, spacing changes, or scaling issues, on printed materials and import them directly into your drawings. All you need is: • A scanned or printed paper or PDF document, such as a bill, printout from a website, or printed form • The corresponding AutoCAD drawing You’ll find Print Import under the “Reference” tab. Simply drag and drop the appropriate file into the drawing area and add any additional details as you see fit. Import from a Web Browser Now you can incorporate feedback from website-based comments and other information from a website directly into your drawings. To import from a web browser, select “Import from Web Browser” on the “Insert” menu. From the browser, select a website, select the appropriate drawing, and import any comments and annotations you see. You’ll find Import from Web Browser under the “Reference” tab. Simply drag and drop the appropriate file into the drawing area. Make Your Way with Drawings Enter drawings faster and even more easily than ever. In the past, you would have to physically open a drawing to insert content, then create and position objects. Now you can insert content while you’re working, without leaving the drawing. To add content to a drawing, choose “Insert” on the “Home” tab. From the “Insert” drop-down list, choose “Insert Drawing.” Once you add an object, you can draw around it. Just drag the outline of your object in the drawing, and it will automatically update with the content of the drawing. If the content changes, you will see a “Change Block” notification. Note: To access this menu, press the F2 key to open the Object Browser, then select the Insert Drawing option on the “Home” tab. To clear out the drawing,
