The intrinsic properties and physical mechanism of newly synthesized ultrathin film materials remain challenging tasks due to the complexity of their chemical structures. A new and effective approach, using thin film electrochemical polymerization, has been developed to deposit the phenylene-ethynylene oligomers with novel structures on Au electrodes to achieve the high-efficiency and high-stability air-stable organic field-effect transistors (OS-FETs). This new approach with the ultrathin (1-10 nm) films prepared by electrochemical polymerization (E-P) of molecules with aromatic backbone and flexible chains is a promising technique to prepare stable organic electronics with electronic properties different from that of existing organic semiconductors. The prepared phenylene-ethynylene oligomers (PEOs) have an ultrathin film structure (1-10 nm) and have three-dimensional a structure with a "core-shell" structure, which is isolated and flexible. In addition, the phenylene-ethynylene oligomers could form ordered and stable film structures on the surface of electrodes. This film stability is much higher than that of the traditional phenylene-ethynylene polymers.Promising therapeutic effects of a novel lipoxin A4 analog (17R)-heptadeca-4Z, 8E, 11E, 13E, 15E, 18E-docosahexaenoic acid on murine endotoxemia and its mechanism. Lipoxygenase (LOX) and cyclooxygenase (COX) pathways are associated with the inflammatory response by generating (R)-(2R,S,S)-5-oxo-ETE and (S)-(2S,3S)-5-oxo-ETE, respectively. In this study, we investigated the role of our recently developed novel lipoxin A4 analog, (17R

While you may not be able to look back at work experience from a previous job, you can examine college work papers and school assignments to show your soft skills in a new light. In particular, you can use your college accomplishments and your research skills to demonstrate how you applied what you learned in the classroom, in addition to your ability to multi-task and think analytically. Connect your social media networks. You probably have a Facebook profile, but do you really update it often? If you haven't updated it in a while, take a few minutes to share a few things about your life. You can also use links to your other social media networks. Instead of typing your social media profile URL on a job application, simply log in with your existing credentials. This will make your application more authentic and show the company you're a passionate social media user. Part 3: The Recipes Now that you've got the general principle of online interviewing down pat, it's time to put it to use. So, you have the job application process down cold, what do you do next? We're going to take the three main components of your job application (writing, social media, and online interviewing) and lay them out
