(Reuters) - German carmaker
Daimler AG and U.S. ride-
hailing company Lyft Inc will
begin testing a “self-driving”

car service in Germany, combining the two companies' expertise, the two said on Monday. In 2017, Daimler purchased the self-driving unit of chip maker Mobileye for more than \$15 billion in an effort to integrate the work of autonomous vehicle experts across its auto unit and its mobility business, called Mercedes-Benz, as well as other divisions. In addition to funding the hardware side of self-driving car development, Daimler said it would help with the software, such as steering

and braking. The partnership marks a milestone for Lyft, which has long said it aims to create a “transportation network” across the United States, working with municipalities and governments. Daimler also said on Monday it had launched its own driverless taxi service in Stuttgart, the capital of Germany’s southern state of Baden-Wuerttemberg, on the outskirts of the northeastern city of Sindelfingen. The service will be up and running in early 2019 and will be

among the first commercialized autonomous vehicle services available to users in Europe, Daimler said. In May, Daimler said it was working on the possibility of the car ride-h

A NOVO dvb-t tuner with receiver card with Linux support for DVB-T. im vietoi teat ovuh spidimit fast lifeview lv5tdlx usb stick sentire Hi, I have just got the Lifeview LV5TDLX USB stick which does not seem to be working and I do not know how to make it work. Are any of your readers successful in using the USB stick? Thanks for your help.. DVB-T2 Tuner for lifeview lv5tdlx zantami driver LIFEVIEW LV5TDLX USB Stick 4.. Lifeview LV5TDLX DVB-T USB Stick. DVB-T2 tuner USB stick. SUPPORTED BY. For Windows 7 & XP. 64-bit.Silver nanoparticles-octyl isothiocyanate-induced germ cell apoptosis in mouse testis and epididymis. Silver nanoparticles (AgNP) are reported to have a harmful effect on human testicular cells. The purpose of the present study was to investigate the mechanism of the effects of AgNP on the testes and epididymis in mice. Adult mice were intraperitoneally injected with AgNP at dose rates of 0.32, 3.2 or 32 mg/kg/day for 14 days. Four mice were killed at each dose, and the testes and epididymides were examined histologically and ultrastructurally. AgNP caused severe testicular degeneration in mice, which was more severe at high dose rates. The silver level in testis was greater than that in blood and liver. The silver level in sperm was greater than that in blood and blood cell, but not higher than that in sperm from mice treated with a vehicle only.
