This is easily achieved by toggling print background off, whilst the document is being printed. However, this is not the case when you print a document directly to a PostScript Printer. This is because PostScript printers require each page to be processed, in order to print the final document. Unfortunately, this means that any changes you make to a document are not visible unless you exit the document and print the new version. The good news is that there is a workaround to this problem. In order to use an advanced feature of the PowerPoint, you
