In March 2019 Autodesk introduced a professional subscription called AutoCAD 360. Autodesk developed AutoCAD 360 to integrate cloud-based CAD capabilities into desktop and mobile applications. Text AutoCAD supports text editing through several methods. The most basic of these are the standard font dialog box and the Text tool. The Text tool is a vector tool, meaning that it draws lines to create text. There are also shape tools, such as the Text tool, that can be used to create text. These tools can also be used to create raster artwork. There is a text renderer that is available for 3D text. Many AutoCAD functions use text to communicate their status to the user. For example, the '.' character can mean "continue", "stop", or "overwrite". In a similar manner, the '?' character can mean "abort" or "cancel". Raster AutoCAD can also import and export raster images. There is an Image Map toolbar. Shape and annotation tools Many tools in AutoCAD allow shape and annotation tools to be used to create or edit objects. There is a selection tool, which is a vector tool. This tool can be used to select components of any shape. Another tool is the spline tool, which can be used to construct a curved line. In previous releases of AutoCAD, the Dimension, Extent, and Explode tools were only available for the 2D Drafting window. With the release of AutoCAD 2013, these tools have been extended to the 3D Drafting window. Also with the release of AutoCAD 2015, the Dimension tool is available on the 2D Drafting window for the creation of Sketch, AutoCAD Architecture, or Xref objects. These three new drawing windows can also be used for dimensioning on 2D drawings. Layers Layers are used in AutoCAD to organize a drawing into layers that can be independently moved, rotated, scaled, and edited. Layers can be hierarchical or non-hierarchical. Hierarchical layers are named by placing the letters after the numeric name. In contrast, non-hierarchical layers are named by placing the letter after the numeric name. By default, the layers are named by placing the letter and the number of the layer in the name. Drawing views AutoCAD
