Biosystems bts 310 user manual Is there a way to do this in vb or direct to a worksheet, the combination of both. I know how to loop through worksheets and remove duplicates and how to do it by conditional formatting and identifying the text, however it can add up and therefore would like to know of another method. I'm new to programming, still having problems with nested loops. Any help much appreciated, Thanks A: If it was a new application, instead of the workbook, I would store the information in a collection or array. That would allow you to keep track of all the details and it's also much easier when you want to display it in a message box. I'll illustrate with a collection of details and any duplicates removed and then it can be compared. I've found in the past that a few duplicates are acceptable. Dim details As Collection 'build the collection of details Dim detailsCount As Long Dim detailsItem As Variant If detailsCount > 0 Then details.RemoveDuplicates() details.Count = detailsCount details.Add "name", newNameValue details.Add "description", newDescValue details.Add "status", curStatusValue 'and so on... End If If details.Count = 0 Then 'no details need storing Else MsgBox details.Count & " records were found" 'loop through each record For Each detailsItem In details MsgBox detailsItem Next detailsItem 'remove all duplicates details.RemoveAll duplicates End If -term memory. Structural preservation of both hippocampus and amygdala was also observed in BRCA1$^{+/-}$ mice. In contrast, no significant difference in the number of cells was observed in the primary visual cortex ([Fig. 4](#f4-bt-23-187){ref-type="fig"}). In a previous study, we reported that the brain structure changes following BRCA1 ablation are independent of its coding properties. We observed that, when the BRCA1 heterozygous mice were analyzed using quantitative polymerase chain reaction (qPCR) to quantify the RNA abundance of several BRCA1 genes, the
