Open up AutoCAD and select toolbox, then click the "Key" command Run the Keygen. Go to "Autocad Options" and check "Always create new documents" Press OK Now it's done. A: The answer is no. I have used the keygen many times. It is more than a tool, it is a way to easily create a key, and it has never failed me. You are encouraged to report a bug on the official page of the keygen (Autodesk Autocad), but no bugs were ever reported. The last time I used it, about a year ago, I found a similar post that showed how you can reverse engineer the.reg file that would convert from the the default registry key into a.reg file, so you could save that in your registry, but that did not work. However, I have used the "program" of the keygen that allows you to save the value that you change in the registry after, as a.reg file. You can go to "desktop tools" of the keygen, and select "change registry values", there you can specify a file, and if you choose a file, it opens it and shows you the changes that you make to the registry. At the end of the selection window, there is an option to save the changes to a.reg file. You can also change the name of the file (preferences) in that same window, but I prefer the other way, and to save it to my disk. BTW: I did not know that there is a tool that can do this, but why do you want to do this. If you need to change a registry value, then you can go to "windows" (or "computer" from mac) and select the "Start Menu" option, and go to "Run" and type "regedit" and you will get the "Run regedit" dialog. A: The only way I have found to do this is by using an AutoCAD plugin that allows you to make custom.reg files that you can upload to the Autocad plugin directory. Then when you open Autocad go to Options>Programs>Plugin and find the file you just uploaded. In there you can set the value and export as a reg file. I am using 2
