keyboard controls are there for your convenience. Game Editions - Tycoon Guns Deluxe - Contains: - All guns for the first story ("Season 1"). Game Editions - Tycoon Guns Collection - Contains: - All guns for the first story ("Season 1"). - All upgrades available for the second story ("Season 2"). Game Editions - Tycoon Guns Super Deluxe - Contains: - All guns for the first story ("Season 1"). - All upgrades available for the second story ("Season 2"). - All guns for the third story ("Season 3"). - All upgrades available for the fourth story ("Season 4"). - All guns for the fifth story ("Season 5"). - All upgrades available for the sixth story ("Season 6"). All of the above on a single physical disc. If you buy this pack, you'll be able to play all games in the collection from the beginning. But if you buy the main pack, only one of them will be free from this incentive. Game Editions - Tycoon Guns Complete - Contains: - All guns for

## **Features Key:**

GC++ - A lot of the revisions I've made for these methods in this companion include the GC++ tools. This is a big commitment but I find they really make a huge difference in the ability to work with the Unicode tagged strings. I wasn't a big contributor to the.ogg tagset that's used in the core game and the tools that come with GC++ are the best way to create one. The one thing that is really hard about the tools is cleaning the tools up. But an entire new tagset took me less than a day to write.

DAE Export - The DAE (Data Archival and Electronic) format. DAE is a tagged format for both XML/HTML. Most of the data fields in the attributes that are saved and retrived are tagging. But there isn't a really solid tagging specification for it. I've made the tagging constraints of tags fairly weak. but the supplemental data fields follow the XMP Public Tagging Schema.

Cache - A lot of the revisions I've made for these methods in this companion include the FGC cache specification.
