And how can I remove all the doubles? A: You can't. I guess you can remove duplicates from your original file and then calculate distances between them, but that's a complete nightmare. What you can do is use a python parser like pyparsing. I have never used it, but from what I saw of it on their own website and in tutorials, it looks like it can handle this situation perfectly. It will be pretty easy once you find out what it can do. This is a link to the instructions on how to use it. I have never done it myself, so I can't give you any more detail on how. By @SimonCocking Office 2016 won't upgrade to the Creators Update – that's why! As one is wont to do when discussing Microsoft products, Office is currently in the middle of a scenario that is guaranteed to put an extra bit of friction in your daily routine. If you're currently running Office 2016 (for Windows or macOS), then the fact is that you'll never be able to upgrade it to the Windows Creators Update. Why not? Because it's very, very likely that the creation tools that you need to upgrade to are currently locked away on a service update that is being tested by some Microsoft engineers, and the potential to upgrade them hasn't yet been resolved. "That means you won't be able to create anything in Office 2016 until the Windows Creator's Update is released – but you'll be able to install it," says our very own CM. "Good luck with that". The CM, of course, is referring to the latest Windows 10 update – which coincidentally is known by Microsoft's codename of 'Creators Update' – and which has brought a completely brand new set of creation tools and features to the table. The good news is that the update is very, very likely to be released before the end of the year – especially as Microsoft prepares to transition its new-wave app development efforts away from the traditional Win32 Windows API and towards its more modern and cross-platform-friendly platform-neutral COM-based standards. "Word, PowerPoint, Excel and Sharepoint will be updated with the Creators Update later this year," Microsoft corporate vice president of applications and services Scott Hanselman announced on Twitter this morning, with Microsoft adding that it was "still waiting on key features of the Windows Visual Studio App Platform" c6a93da74d
