
PATCHED Windows 8 Pro (x86) Spanish - Untouched ISO __HOT__

hello, i recently purchased one of those cheap oem windows 8 pro laptops and it was left with me with all the keys to the kingdom. i burned the iso and thought everything would work just fine. however, when i try to boot from the disk, it pops up a screen saying that it's unable to boot because the disk is damaged. i tried rebooting the machine and selecting the iso and it reads the file info fine and then just the moment i try to boot it up, the screen says the same thing. should i just buy a new computer to install the os? is it the virus i am talking about? it's been a while since i have installed a new os so i hope you can help me out. thanks in advance. shannon
