DESCRIPTION Keymacro is a helper program for frequently used macro commands in VIM. The uses of keymacro include: • Using macros to write VIM scripts. • Keyboard shortcut for commonly used macros. • Alternative ways to run commonly used macros. • Moving between Insert mode, Normal mode and Command mode with shortcut keys. Keymacro version is a modification of original MacVIM (MacroVIM) for Windows. It is a modification with a new graphic interface with the original MacVIM and is backward compatible with the original MacVIM. As a modification of the original MacVIM, keymacro provides many advanced key bindings that have not been implemented by the original MacVIM. What's New * Script and Installed Packages Two major new features in keymacro version 1.3 are: • The new script manager lets users quickly find, search for, install and remove a script and restart Vim. • Installed Packages can be listed in Vim's plugin manager. * Additional bind commands Keys for many commands and modes are changed to various methods in keymacro. Here are the new bind commands in keymacro version 1.3: CTRL-N Moving to Normal mode CTRL-O Opening current file for editing CTRL-T Toggling file type CTRL-U Undoing last edit CTRL-A Append/prepend to selection CTRL-D Delete selection CTRL-I Enter Insert mode (Alt-i) CTRL-H Select and delete highlighted text CTRL-J Paste from clipboard (Clipboard extension) CTRL-K Cut from selection CTRL-L Search backward CTRL-
