The new Autosave feature allows you to record one of your edits and store it as a draft. Later, you can go and review the draft in the view on iOS, compare it to the photo version, and attempt to edit it again. There is also a draft save location: the top right corner of your Mac. Similarly to Lightroom, you can also store your last version of the photo in the cloud. The new Pen tool is also worth mentioning because it is easy to use. A new Lasso tool is also very simple to control when you are zooming in on a black and white image. With Touch, you can also apply it on a layer. You can also create image-stitching borders in the new Polylasso tool. Curve adjustments are also more user-friendly with modifiers that allow both linear and circular movements. The reframing and masking features help you develop a print-ready, high-quality version of a photo. The selection engine is now easier to use and more responsive. The updated slicing tools allow you to take sections of an image and place them in a separate document for editing on an iPad. The new Liquify feature allows you to drag and drop details like shadows and highlights. Mac users can now apply transforms and patterns on the mobile side. Thanks to the new object tracking, the Sharpen and Soften tools work faster and allow you to more gently edit an image. (They are not suitable for portraits, though, as the smudging often falsifies the tracking.) A new Fat Filter, which is a graphic theremin, can also be used to add interest or to make the edges stand out.

Frustrated with the cluttered notifications panel and the confusing 'What's New' screen, Adobe has finally got something right. Their new 'What's New' screen shows notifications for everything in Photoshop. Type 'What's New' in the Find feature and the What's New screen will open. There are so many new features coming in Photoshop which you should know about before you start using the program. The most important new feature of Photoshop for 2020 is 'morph'. 'Morph' takes any type of object like a human face, symbol, text or even photo, and gives it a strange ethereal glow to give the feeling of

eerie or celestial. The option to make weird stuff for the fun world is amazing.

One of the best features of Photoshop's CC version is the Content-Aware Fill option. It is one of the most interesting features of Adobe Photoshop. This feature is built-in feature and it is very helpful for stylizing the images. Most people can make interesting output by using this tool. It can remove unwanted items from the images such as backgrounds, objects, etc. This powerful feature lets you put a similar tone to all the objects. You can combine the similar elements and you can treat the similar objects in the similar way. This process is called the Content-Aware Fill and you can change the style and output result by using this feature. You can erase an unwanted object from the image and you can replace the unwanted objects with the same one. It is very useful and most people use it for merging pictures. The Content-Aware Fill (CAF) is a useful and powerful Photoshop feature that is like the Gimp. Not only does this allow you to remove unwanted objects, but it allows you merge two photos into one as well. Currently, the developer is trying to make it even better so you can control the merging better. The layer styles allow you to personalize each layer of your image, including colors, brightness, and effects. Outlining the objects using layer styles gives you the opportunity to edit them yet without affecting the other parts of the image. Photoshop has been revolutionized from Photoshop CS. Remember, Photoshop CS was a big deal for Adobe. The CS released couldn't handle layers. It was a very difficult and complicated process to create layers. Photoshop CS6 introduced what we know today as layers in Photoshop. So, layers serve as the most important feature to advanced Photoshop users.
